

Group Policy Document – Team AA

As Team AA is composed of students who are enrolled on different courses with timetable conflicts, we agreed to maintain regular discussions using Slack instead of routine meet ups.

All files, including the checkpoint template, were uploaded on to a shared OneDrive folder to ensure all members had access to the working documents, keep everyone up-to-date of completed tasks and make aware of outstanding challenges.

For the penetration testing, it was agreed that the tasks be self-allocated for each person to work on independently. The checklist was updated accordingly and routinely to ensure there was no duplication of work.

For the report, we agreed to allocate the different attacks between the members to research and write up individually. Once this was complete, we merged all contributions into a final master document.

Throughout this project, we made sure to work in line with mutually agreed deadlines, maintain effective dialog and ensure that work was submitted ahead of schedule.
